## 1. Installation:

A. Prepare an installation place and mark mounting points using installation template as below:

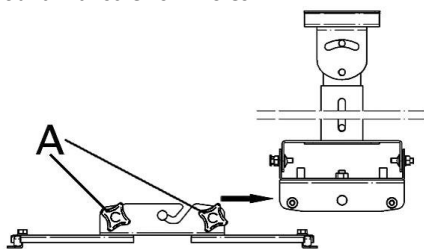

B. Install projector on universal projector adapter. Use mounting screws from mounting set.

**Warning!** To connect the mount with the projector, select the appropriate screws from the mounting kit according to the recommendations of the projector manufacturer.

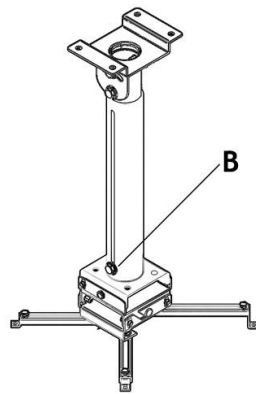

C. Joint adapter with installed projector with projector mount as described below using middle hanger. Block projector on a mount with screws in holes A.

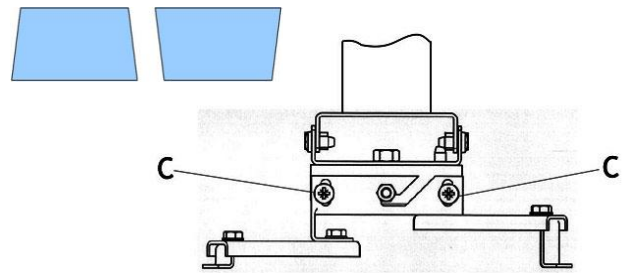

D. Check and adjust proper projected image. If needed adjust projector image on a ceiling mount.

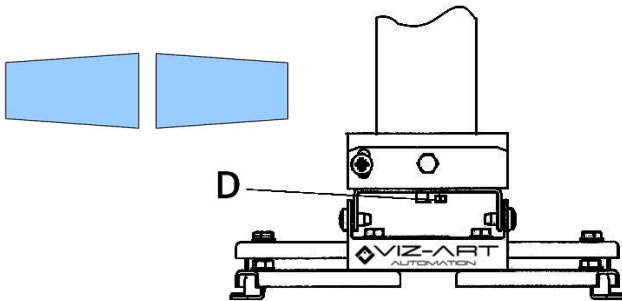

A. Adjusting height of installed projector: Loosen screw B and adjust expected height of projector. tighten screw- B. In Direct Mount height is non adjustable

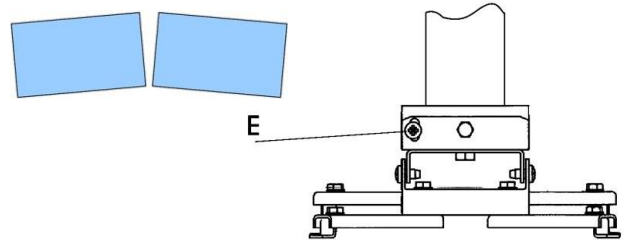

B. Pitch axis adjustment.  
If projected image is to low or high on the screen/vertical distortion/, Loosen screws C and tilt projector to expected vertical position. Tighten screws C, when finished

C. Yaw axis adjustment.  
If projected image is to right or left on the screen/horizontal distortion/,– rotate projector on a screw D.

D. Roll axis adjustment.  
Loosen screws E. then adjust the projector mount's roll adjustment such that the top and bottom edges of the image are approximately horizontal and aligned with the top and bottom of the screen. Tighten screws E, when finished.
