VIZ-ART
AUTOMATION

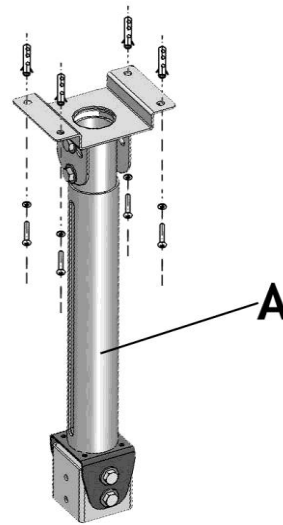

1. Installation:

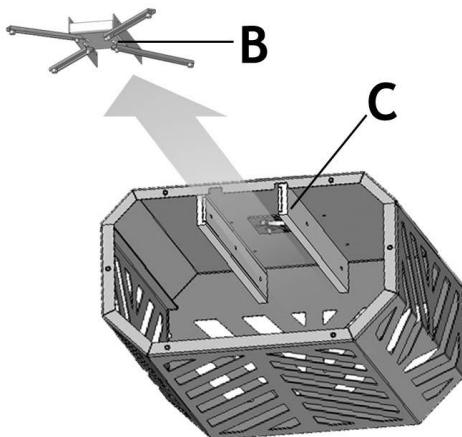

A. Prepare an installation place and mark mounting points using installation template as below:

B. Install element A to the ceiling. Use the selected pins and screws from the assembly kit.

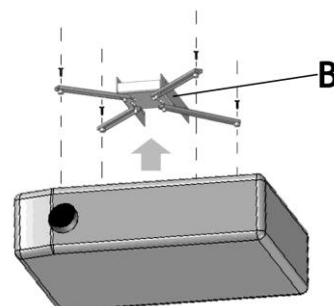

C. Remove element B from guide C from protection cover.

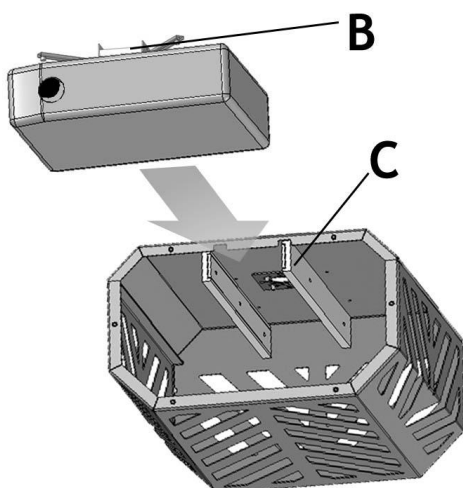

D. Install projector on projector mount B.

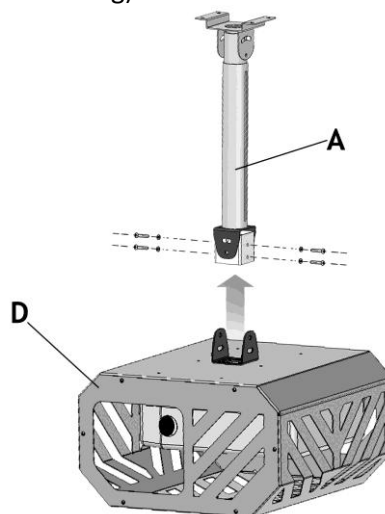

Warning! To connect the mount with the projector, select the appropriate screws from the mounting kit according to the recommendations of the projector manufacturer.

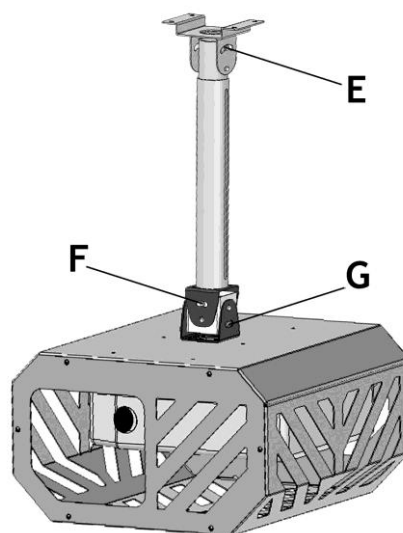

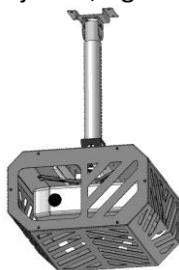

E. Install projector (mounted on element B) on guide C in a cover.

F. Using screws install front D to a cover. Then install cover to a element A (already installed to the ceiling).

G. Adjusting projector image. If projected image needs to be adjusted, loosen the appropriate screw E, F or G and tilt the cover (with projector inside) into a proper position. After obtaining the correct position of the projector, tighten screws.
